S&B Technical Products core business is pipe sealing systems – elastomeric/rubber products for the waterworks industry. S&B has the largest pipe seals market share with 85-90% of the North American market.

Since 1981, S&B has been at the forefront, innovating new technology for piping and we just took it to another level.

Introducing “The RIG”

In any given year, millions of dollars along with gallons of clean water are wasted on human error when installing PVC pipes incorrectly, by over-insertion.

With the RIG, pipe layers will consistently prevent “over-belling” that can lead to cracks and leakage in the bell of the pipes.

Installation in 30 Seconds

In a matter of 30 seconds or less per pipe, you can install the RIG and potentially save millions of dollars.

Simply slide the rubber seal on the pipe to the preset insertion line and tighten with a quick spin of a power drill, Yes, it is as simple as that.

Ask your pipe vendor if they offer the RIG
